ORAVYS pilot report: "Test your own calls"

> **FORMAT EXAMPLE. No ORAVYS pilot has been completed yet.** This document shows the structure a customer receives at the end of a pilot. Every company name, call, date, count and result band below is a placeholder written in [brackets] or marked "illustrative". Nothing here is a measured result, and nothing here describes how the service would behave on your calls.

Version of 28 October 2026. Prepared by ORAVYS.

---

1. Pilot at a glance

Item	Content
Customer	[Customer name], [team that owns the pilot, for example fraud operations or claims]
Customer contact	[Name, role]
ORAVYS contact	Eliot Cohen Bacrie, founder
Pilot dates	[Kickoff date] to [delivery date], 30 days
Recordings received	[n] of about 20 agreed
Recordings analyzed	[n]
Recordings that could not be analyzed	[n], listed in section 4 with the reason
Contract	Pilot at 990 USD, one-off, under the NDA signed on [date]
Decision meeting	[date], with [names]

2. Scope agreed at kickoff

Written and signed before any recording is sent, so the result cannot shape the question.

- **The question you want answered.** Example: "For calls our team already flagged as suspicious, was the voice that of a real person speaking live?"
- **Which recordings.** About 20 calls chosen by your team: for example claims calls, service calls, call-backs, or voice messages. You decide the mix. A useful pilot includes calls you are confident are genuine, not only suspicious ones.
- **What you tell us about each call.** Only a reference number and the type of call. You may keep your own notes on what you already know about each call; we do not need them to produce the reports, and you can compare afterwards.
- **What is out of scope.** Identifying who made a recording, judging whether fraud took place, and any decision about a customer.

3. How the pilot runs

- **Day 0. NDA and scope.** Mutual NDA (template at oravys.com/nda, or yours). The scope in section 2 is fixed in writing.

- **First week. Transfer.** You send the recordings through a channel your security team approves. We confirm receipt with the SHA-256 fingerprint of each file, so both sides can later check that a report refers to the exact file you sent.
- **During the pilot. Analysis.** Each recording goes through the same ORAVYS analysis used for a paid check on oravys.com. Every call gets its own report.
- **By day 30. Summary and meeting.** You receive this document, one report per call, and a review meeting with your team.

How the analysis works is not described here: it is covered by our patent filings. What matters for your review is in the reports themselves: the result band, the limits printed on each report, and the fingerprint that ties each report to its file.

4. Results

4.1 Summary by result band

Result band	What it means	Number of calls
Strong synthetic signals	The recording shows strong signs of a synthetic or cloned voice.	[n]
No strong synthetic signal	No strong sign was found. This does not prove the caller is who they claim.	[n]
Inconclusive	The recording did not allow a clear reading (for example too short, too noisy, or heavily processed). Listed, never hidden.	[n]
Not analyzed	File unreadable, empty, or outside the agreed scope.	[n]
Total		**[n]**

4.2 One line per call (each line points to a full report)

Your reference	Call type	Duration analyzed	Analyzed (UTC)	Result band	SHA-256 of the file	Report ID
[REF-01]	[Claims call]	[mm:ss]	[date, time]	[band]	[64 hexadecimal characters]	[ID]
[REF-02]	[Voice message]	[mm:ss]	[date, time]	[band]	[64 hexadecimal characters]	[ID]
...	...	...	...	...	...	...

4.3 What each per-call report contains

This is the report page the product already produces for a paid check (an anonymized sample is available on request, see oravys.com/security):

- **Result band**: one of the three bands above.
- **Synthetic-voice score**: shown on a 0 to 100 scale only when the result is conclusive. It is not a probability and not a certainty percentage. No score is shown for an inconclusive result.
- **Details**: duration analyzed, date and time of the analysis, detector version, SHA-256 fingerprint of the file, report ID.
- **What this does not prove**: the limits of the result, printed on every report.

4.4 Calls to review first (illustrative wording)

- "[REF-xx] and [REF-yy] show strong synthetic signals. We suggest a person who knows the context of these calls reviews them first, starting with any money movement or account change that followed."
- "[REF-zz] is inconclusive because [reason recorded in the report]. If this call matters, a longer or cleaner copy of the recording may allow a clear reading."

4.5 What we noticed about the recordings themselves (illustrative wording)

Observations about the material you sent, not about your customers. For example: "[n] recordings were shorter than [x] seconds of speech", "[n] files had been converted more than once before reaching us". These notes help you decide how to keep recordings in future.

5. What this pilot does not prove

- A result band is an investigative indicator, not a definitive conclusion. It must be supplemented by human review.
- "No strong synthetic signal" does not mean a recording is genuine or that the caller is who they say they are.
- "Strong synthetic signals" does not identify who made a recording or why, and it is not proof of fraud.
- About 20 recordings is a small set. This report says nothing about how the service would behave on other calls, other lines, other languages or larger volumes.
- It does not replace your own controls, such as calling back on a known number or following your payment procedures.
- It is not a legal certification and not an expert opinion. A signed forensic examination is a separate service.
- You stay in charge of every decision. ORAVYS gives you the evidence.

6. Data handling during the pilot

Summarized from oravys.com/privacy and oravys.com/security; the NDA and, where signed, the data processing agreement take precedence.

- Processing in the EU region of our cloud provider.
- Audio is deleted after analysis. Reports are kept at least 30 days, then deleted automatically; you can ask us to delete them sooner.
- No training on your recordings without your separate written consent.
- On-premise pilots are scoped by contract.

7. Next steps (options for the decision meeting)

Option	When it fits	Price on oravys.com/pricing
Stop here	The question is answered, or the problem is not a priority this quarter. You keep the reports.	None
Continue on your own calls	You want checks on new calls as they come, for one team.	Business, from 899 USD per month

Option	When it fits	Price on oravys.com/pricing
Connect your systems	You want results inside your own tools.	API, from 99 USD per month; Enterprise from 2,900 USD per month, by contract
One call needs a signed examination	A specific call may go to a claim, a dispute or court.	Forensic examination, from 5,000 USD per case

The meeting ends with one dated next step, whichever option you choose, including "stop".

Format example, 28 October 2026. No customer, no recording and no result in this document is real. Contact: oravys.com/contact.
